

# Good Practices

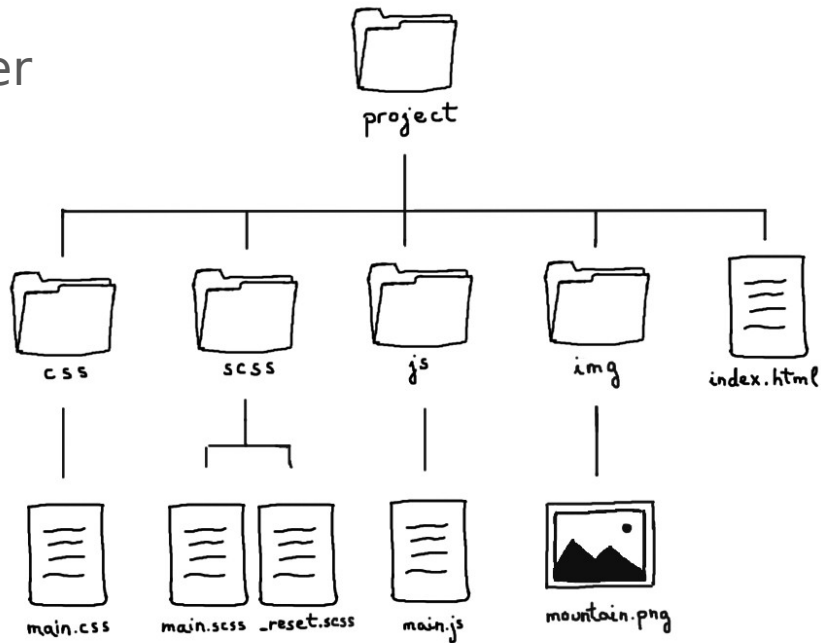

# Project structure

- Each type of file in its folder

- CSS in /css
- Media in /media
- Images in /img  
or in /media/img

- Meaningful names

- Main html: index.html

# Download your libraries

Always download all used libraries. Why?

Because we depend on them

We cannot be sure that we always will be able to access them

Our web page may not work properly / security errors

# Naming files

- All file names should always be **lowercase**
- No spaces, use “-” or “\_” to separate
- No symbols like “\$” or “%”
- No accents like “á” or “í”

# Coding

- Always indent
- Meaningful names for variables and functions
- Names with no special chars
- Simple code, without repetitions
- Comments if the code is long
